If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary

Application No.

10/002,661

Applicant(s)

SUGIYAMA ET AL.

Examiner

Dave Czekaj

Art Unit

2621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 April 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-7 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-7 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/2/07 has been entered.

Response to Arguments

Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumura et al. (US 5,835,144) in view of Hanks et al. (6493041), (hereinafter referred to as "Hanks") in further view of Machino et al. (4719620), (hereinafter referred to as "Machino").

As for Claim's 1 and 4, Matsumura et al. teach an input means for inputting the input data (Matsumura: Column 8, lines 3-6), start detecting means

for detecting the start of the predetermined unit of the input data, in which the predetermined unit corresponds to a frame (Matsumura: Column 1, line 61 to Column 7, line 6; Column 9, lines 21-29; Column 9, lines 39-50), means for receiving a frame end signal indicative of the end of a number of frames (Matsumura: Column 10, lines 51-59; Column 9, lines 35-50); end detecting means for detecting the end of a respective frame based on the frame end signal (Matsumura: Column 10, lines 51-59; Column 9, lines 35-50), and signal processing means for making an action on the variable length code active at the start detected by the start detecting means (Matsumura: Column 8, lines 38-64), for making the action on the variable length code inactive at the end detected by the end detecting means (Matsumura: Column 10, lines 51-59; Column 9, lines 35-50), and for initializing the state of the action on the variable length code at the end detected by the end detecting means (Matsumura: Column 6, lines 55-65). However, Matsumura fails to disclose the frame end signal processing as claimed. Hanco teaches that prior art video systems provide poor results because they utilize adulterated versions of the video signal (Hanco: column 1, lines 44-47). To help alleviate this problem, Hanco discloses means for receiving a frame end signal that is synchronized with end of frame data and is indicative of the end of each of a number of frames, wherein data received after the frame end signal and before the start of a next frame is not processed and is designated invalid (Hanco: column 8, lines 45-50). Machino teaches that there is a need in the art to avoid collisions (Machino: column 1, lines 10-24). To help

alleviate this problem, Machino discloses when the start of the frame is not detected, data received is designated invalid allowing immediate processing of the next frame thereby eliminating invalid data and reducing further lost data (Machino: column 3, lines 43-50, wherein the start of frame is the frame-start signal, wherein if the signal is not detected, the next frame is immediately processed). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to take the apparatus disclosed by Matsumura, add the end of frame signal taught by Hanco, and add the processing taught by Machino in order to obtain an apparatus that produces accurate results.

As for Claim 2, Hanco teaches the input data comprises MPEG data (Hanco: column 2, lines 45-46).

As for Claim's 3 and 5, although not disclosed, it would have been obvious to record the output data (Official Notice). Doing so would have been obvious in order to save the data for future use.

As for Claim 7, many of the limitations have been addressed in the above rejections. In addition, Matsumura et al. teach suspending processing for a period of time, the period of time being from the end of frame data to a subsequent start signal, when an error is detected (Matsumura: Column 8, line 65 to Column 9, line 29), detecting a start code for a corrected stream of data (Matsumura: Column 9, lines 26-29), and re-initiating the processing step as a function of the detecting step (Matsumura: Column 9, lines 26-57).

Art Unit: 2621

3. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumura et al. (US 5,835,144) in view of Hanco et al. (6493041), (hereinafter referred to as "Hanco") in further view of Machino et al. (4719620), (hereinafter referred to as "Machino") in further view of Ching et al. (US 3,971,888).

As for claim 6, Matsumura et al. in view of Hanco in view of Machino fail to specifically teach where the means for receiving includes a flip-flop circuit, but Ching et al. does (Ching: Column 15, lines 4-37). Since the flip-flop circuit can be used to control how the signal is received by energizing and de-energizing the circuit, it would have been obvious to one of ordinary skill to use a simple flip-flop circuit or any other type of circuit that would be capable of controlling when the circuit is energized or not in order to control when the signal is received.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dave Czekaj whose telephone number is (571) 272-7327. The examiner can normally be reached on Mon-Thurs and every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mehrdad Dastouri can be reached on (571) 272-7418. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
